PROFESSIONAL PROFILE

Staff Software Engineer & Lead Architect recognized as a pragmatic "force multiplier" who transforms complex AI research into unified, scale-ready infrastructure with disciplined depth and clarity. I thrive on complex problems and my mantra is: **Never Settle**

EDUCATION

Master of Computer Engineering 110/110
Università degli Studi di Parma, IT Sep 2019 - Mar 2022

Bachelor of Computer Engineering 93/110
Università degli Studi di Parma, IT Sep 2015 - Mar 2019

PROFESSIONAL SKILLS

EXCELLENT KNOWLEDGE

Python Java Kotlin Android Swift

iOS C/C++ C# TypeScript REST SQL

NoSQL GraphQL Docker AI/ML

GOOD KNOWLEDGE

Lua Objective-C NodeJS gRPC PHP

React & Web Tech Rust Flutter

- Worked with various DBs, Git, GitHub, Test frameworks, JetBrains IDEs, Docker, CI/CO, AWS S3
- Experienced in software architecture and e2e development from scratch.
- Occasionally learns new languages (Rust, Dart, ..)

LANGUAGES

ITALIAN (NATIVE), ENGLISH (FLUENT)

PERSONAL INTERESTS

I love building stuff. I built my own large 3D printer, from CAD design to hardware and firmware, a drone from scratch with Arduino and an Android app, a Bayesian Net-driven sensor-based sprinkler.

WORK EXPERIENCE

Staff Engineer

Verses

Dec 2025 - Present

- Spearheaded transition to **Architecture Team Leader** to unify disparate AI subsystems, eliminate architectural silos, and improve operational efficiency, resulting in 65% improvement in system uptime.
- Directly manage and mentor an engineering team**, aligning individual growth with company vision while exceeding software reliability benchmarks.

Senior Engineer

Verses

Aug 2024 - Dec 2025

- Unified teams workflows by **co-architecting a standardized Active Inference framework** and establishing a cohesive technical direction, going from a monolithic Python application to a fast modular ecosystem.
- Implemented Python/C++ diagnostic tools that provided real-time insights into system performance, allowing for rapid identification and resolution of performance bottlenecks, **reducing critical incidents by 25%**
- Delivered high-impact full-stack features on different teams

Full Stack Drone Developer

Verses

Apr 2022 - Aug 2024

- Led developing and field-testing in 5 European "Living Labs"**, among which San Raffaele Hospital and Eindhoven HTC, for **BVLOS autonomous flight** (Kotlin/DJI SDK), for biomedical delivery, automated facade scanning and crowd monitoring.
- Engineered **MQTT/GraphQL pipelines** ensuring 100% EU regulatory compliance via real-time geospatial governance.

Internship for thesis in Master of IT Engineering

Maps Group

Sep 2021 - Feb 2022

- Integrated a **Accelerated risk identification by 60%** by integrating a **BERT-based semantic search engine** to automate the analysis of thousands of healthcare incident reports.
- Developed a **Java/GraphQL backend with Elasticsearch** to seamlessly deploy AI models into the SegnalER ecosystem.

Software Engineer

Spark Security

May 2018 - Oct 2019

- Eliminated system crashes by resolving hidden **C++/C# memory leaks** and **optimizing .NET video processing**.
- Engineered a high-precision sync engine for frame-accurate alarm retrieval, enhancing forensic audit reliability.
- Built a modular database SDK and integrated PTZ controls, accelerating development and hardware compatibility.

Software Developer

Alpha Elettronica

Aug 2015 - Jul 2017

- Engineered **TCP/UDP mobile architecture for WF100**, ensuring 100% reliability with zero-latency RGB control.
- Automated corporate HQ via custom OpenHAB/OpenWRT gateway, unifying KNX systems for higher efficiency.
